Implementation Guide Instructions

Purpose:

This implementation guide has been developed to assist local governments in their effort to map their operational chart of accounts to the uniform chart of accounts developed by the Office of the Utah State Auditor.

Process:

Mapping a chart of accounts is a process of making and documenting many decisions. It requires a process of understanding the way financial transactions in a governmental entity are grouped together in their own chart of accounts and then applying that understanding to effectively match funds, functions, and accounts with the uniform chart of accounts.

To facilitate this process we have provided the following tools.

- **Implementation tips** – Key tips that should be considered when making decisions as to where accounts should be coded.
- **Example Mapping of ABC City’s Enterprise Funds** – This tutorial of mapping the chart of accounts of ABC City to the uniform chart of accounts will help you understand the step-by-step approach to the mapping process.
- **Standard Chart of Accounts Mapping Examples** – For local governments that use Caselle, Pelorus, or a chart of accounts patterned after the Office of the Utah State Auditor’s former chart of accounts, we have provided a template for how those chart of accounts map over to the new uniform chart of accounts. Not only does this provide a template to those that use these chart of accounts, but it also provides other local governments with an idea as to where their accounts may fit into the new uniform chart of accounts. These mapping examples can be found in Appendices A through C.
 - **Disclaimer** - Please note that these mappings have been developed with a general understanding of accounting. It is the responsibility of each local government to customize each of their mappings to reflect their individual financial operations.

For additional questions regarding the implementation process, please contact the Office of the Utah State Auditor.

Ryan Roberts	ryanroberts@utah.gov	801-538-1721
Scott Parke	sparke@utah.gov	801-808-0164
David Stringfellow	dstringfellow@utah.gov	801-538-1356

For questions regarding how to prepare your document containing your transactions containing the mapping to the Uniform Chart of Accounts for uploading to the Transparency website, contact the Utah State Division of Finance.

Darrell Swenson	dswensen@utah.gov	801-538-3059
-----------------	--	--------------

Implementation Tips:

- General Government functions (100000) should only be used for the governmental funds of general purpose governments. Enterprise funds and specialized governments (i.e. local and special service districts, AOGs, etc.) should use the functions that pertain to their operations (i.e. UTA would use the Mass Transit function (300700), an enterprise fund for culinary water operations should use the Culinary Water System function (300900)).
- Whenever a specific account code cannot be found in the uniform chart of accounts for an account in your operational chart of accounts, use an account code that is more general. It will be further clarified through use of the function code. For example, to record ambulance fee revenue, use the fees account (30040200) and the ambulance function (201003).
- If you have a question as to where an account should be coded, read the account descriptions for further clarification.
- The function codes should not be used for balance sheet accounts (assets, liabilities, and net position). Rather the “not applicable” function (000000) should be used for these accounts.

Example Mapping of ABC City's Enterprise Fund Chart of Accounts to the Uniform Chart of Accounts

Introduction:

In addition to a general fund, ABC City operates two enterprise funds; a Water Fund which is used to track the costs and revenues of the City's culinary water system, and a cemetery fund used to track the operations of the City's cemetery. The City's current chart of accounts for its enterprise funds is shown below.

Assets

Cash
Accounts Receivable
Infrastructure
Accumulated Depreciation
Machinery & Equipment
Vehicles
Water Rights

Liabilities

Accounts Payable
Customer Deposits
Bonds Payable

Net Position

Invested in Capital Assets, net of related debt
Restricted
Unrestricted

Revenue

Water Sales
Customer Deposits
Water Impact Fees
Cemetery Lot Sales
Perpetual Care Fees
Grave Open/Close Fees
Interest Earnings
Miscellaneous Revenue
Transfers

Expenditure

ADMINISTRATION

Salaries & Wages
Employee Benefits
Travel & Training
Office Supplies & Expense

MAINTENANCE

Salaries & Wages
Employee Benefits
Equipment Maintenance
Fuel & Oil
Water System Repairs
Chemicals & Testing
Capital Outlay - Line Replace
Capital Outlay - Equipment
Depreciation

Step 1 – Map Funds

The first step is to assign a fund number to each of the City’s funds. Using the Uniform Chart of Accounts, the city can assign any fund number between 501 and 599 to their enterprise funds.

Description	Number
Water Fund	501
Cemetery Fund	502

Step 2 – Map Functions

The next step is to assign a function number to the activities performed by each fund. After looking at the Uniform Chart of Accounts, the City has determined the following functions best represent the activities of its enterprise funds:

Function Number	Description
300900	Public Works - Water System
300901	Public Works - Water System - Administration
300902	Public Works - Water System - Operations
301800	Public Works - Cemetery
301801	Public Works - Cemetery - Administration
301802	Public Works - Cemetery - Operations

The main function codes (300900 and 301800) will be assigned to all revenue accounts. The Administration functions (300901 and 301801) will be assigned to those expenditure accounts related to the administration, such as salaries and wages of city officials, office supplies, etc. The Operation functions (300902 and 301802) will be assigned to those expenditure accounts related to the actual operations of the water supply and cemetery funds, such as infrastructure improvements, repairs and maintenance of the lines, cost of testing the water, etc. Functions are not assigned to balance sheet accounts.

Step 3 – Map Accounts

The last step is to map over each individual account over to its corresponding uniform chart of account number.

ABC City Accounts	Uniform Chart of Account	
	Account	Description

Appendix A

Mapping Standard Pelorus System of Accounts to Utah Uniform Chart of Accounts

Introduction:

In this appendix, we capture the mapping from *System of Accounts The Pelorus Method* © 2009 (Pelorus) to the Office of the Utah State Auditor Uniform Chart of Accounts (UCOA).

Mapping:

Pelorus contains two groups of numbering: a four digit number (0000) sometimes followed by a decimal and an additional digit (.0) to describe Accounts and Functions and a three digit number (000) to describe Character and Object.

This system of numbering will be mapped into three groups of numbering under the Uniform Chart of Account: Fund is a three digit number (000), Function is a six digit number (000000), and Account is an eight digit number (00000000).

PELORUS Accounts and Functions map to:

UCOA Funds – the standard Pelorus documentation assumes two funds for a government, a general fund and a proprietary fund. Within the Pelorus Accounts and Functions section of numbers are blocks of numbers that indicate whether a transaction would be within the general fund or the proprietary fund. Pelorus Accounts and Functions starting with a 3 or 4 would map to [100 – General Fund](#) in the UCOA. Pelorus Accounts and Functions starting with a 5 or a 6 would map to [500 – Enterprise Fund](#) in the UCOA.

UCOA Functions – the standard Pelorus documentation merges Accounts and Functions together, the UCOA has separate categories. Some blocks of numbers map to the function. The specific mapping follows in the detailed mapping tables.

UCOA Accounts – the standard Pelorus documentation merges Accounts and Functions together, the UCOA has separate categories. Some blocks of numbers map to the Account. The specific mapping follows in the detailed mapping tables.

PELORUS Characters and Objects map to:

UCOA Accounts – the standard Pelorus documentation Character and Object field maps to particular blocks within the Accounts numbering. The specific mapping follows in the detailed mapping tables.

The following mapping was prepared by the Office of the Utah State Auditor. The time estimate for completing a mapping of similar size and scope is approximately 3 – 6 hours.

This table is the detailed mapping of the **Pelorus Account and Function** to the **Uniform Chart of Account Fund, Function, and Account**. The Uniform Chart of Accounts for Local Governments of Utah can be found at <http://auditor.utah.gov>. When the Coding Block contains an asterisk (*) any valid segment number is possible in the mapping depending upon the nature of the transaction.

Appendix B

Mapping Caselle Sample Chart of Accounts to Utah Uniform Chart of Accounts

Introduction:

In this appendix, we capture the mapping from *Caselle's AnyCity Corporation Chart of Accounts* (Caselle) to the Office of the Utah State Auditor Uniform Chart of Accounts (UCOA).

Mapping:

Caselle has a two segment account structure for balance sheet (BS) accounts containing: a two digit number (00) for Fund and a five digit number (00000) for a Detail Item. There is a three segment account structure for revenue and expenditure (P&L) accounts: a two digit number (00) for Fund, a two digit number (00) for a Category, and a three digit number (000) for a Detail Item.

This system of numbering will be mapped into three groups of numbering under the Uniform Chart of Account: Fund is a three digit number (000), Function is a six digit number (000000), and Account is an eight digit number (00000000).

Caselle Funds map to:

UCOA Funds – The first segment of both the BS and P&L accounts represents the fund. This segment can be mapped directly to a UCOA fund.

Caselle Categories and Detail Items map to:

The second segments for the BS account, as well as the second and third segments of the P&L accounts have different meanings depending on the fund and preceding segment. When faced with this situation, the best approach is to map each individual account, based on its description, to a corresponding UCOA Function and Account.

The following mapping was prepared by the Office of the Utah State Auditor. The time estimate for completing a mapping of similar size and scope is approximately 4 – 8 hours. The specific mapping follows in the detailed mapping table.

This table is the detailed mapping of the **Caselle Sample Chart of Accounts** to the **Uniform Chart of Account Fund, Function, and Account**. The Uniform Chart of Accounts for Local Governments of Utah can be found at <http://auditor.utah.gov>. When the Coding Block contains an asterisk (*) any valid segment number is possible in the mapping depending upon the nature of the transaction.

Appendix C

Mapping prior Uniform Accounting Manual Master Chart of Accounts to Uniform Chart of Accounts for Local Governments of Utah

Introduction:

In this appendix, we capture the mapping from the prior *State of Utah Uniform Accounting Manual Master Chart of Accounts* (PCOA) to the Office of the Utah State Auditor Uniform Chart of Accounts (UCOA).

Mapping:

The prior Master Chart of Accounts contained two groups of required numbering: a two digit number (00) to describe the Fund, a four digit number (0000) to describe the Type & Source. Two optional groups of numbers provided additional detail: a three digit number (000) or Sub Detail Source Code with extra account, revenue source, or expense object information; another optional three digit number (000) contained program, performance, and cost codes.

This system of numbering will be mapped into three groups of numbering under the Uniform Chart of Account: Fund is a three digit number (000), Function is a six digit number (000000), and Account is an eight digit number (00000000).

PCOA Funds map to:

UCOA Funds – the fund mapping nearly matches the new structure. The new structure is more flexible by providing entities with the ability to increment their different types of funds without reference to particular types of accounts. If multiple funds exist of a particular type, each fund needs a different number. These do not need to be coordinated with the nature of the account as occurred in the prior system. For example, in the prior system, Swimming Pool Fund was 56, in the new system if it was the fourth enterprise fund of the governmental entity, it could be numbered 504 but could be any unique number in (5**). This is presented in the detailed tables.

PCOA Type & Source Accounts map to:

The PCOA merged information on accounts and functions, the UCOA has separate categories for these concepts. Some blocks of numbers map to a function and account. Others map only to a function or an account. The specific mapping follows in the detailed mapping tables.

PCOA Sub Detail Source Codes map to:

UCOA Accounts – the PCOA optional sub detail source codes normally map to the expense section of the Account. The specific mapping follows in the detailed mapping tables.

UCOA Functions – the PCOA contained a few instances in which a combination of function and account is the proper mapping to the UCOA. The specific mapping follows in the detailed mapping tables.

The following mapping was prepared by the Office of the Utah State Auditor. The time estimate for completing a mapping of similar size and scope is approximately 4 – 8 hours. The specific mapping follows in the detailed mapping table.

This table is the detailed mapping of the **prior State of Utah Uniform Accounting Manual Master Chart of Account Fund** to the **Uniform Chart of Account Fund**. The Uniform Chart of Accounts for Local Governments of Utah can be found at <http://auditor.utah.gov>. When the Coding Block contains an asterisk (*) any valid segment number is possible in the mapping depending upon the nature of the transaction.
